

Andrew Patton

MSc, BSc, 5+ years AAA industry experience

📍 Newcastle-upon-Tyne, United Kingdom

Profile

Software engineer with over 5 years experience spanning pre-production, early production and late production phases of AAA videogame projects.

Responsibilities have included team management, stakeholder communication, long-term project planning and time-costing, as well as ownership and championing of integral features; including both greenfield and legacy systems.

TODO AP: Write more in profile about what my strengths are

Experience

Senior Programmer @ d3t Keywords

(October '20 - Present)

Redacted Project A

C# WPF WCF Python

Spent 5 years playing a leading role in the tools team, developing a proprietary game engine for a highly-anticipated, upcoming AAA game.

My **programming** work primarily involved leading the client's "Asset Management" tech initiative; modernising & maintaining an asset browser (à la UE5's Content Browser), and building a bespoke asset reference tracking system, from scratch.

My **management** work involved liaising with the client to refine requirements, communicate risks, and present demos/progress updates to stakeholders. I was also responsible for various teams of up to 5 engineers; assisting them with their work, and ensuring their workloads were balanced with their capacities.

Redacted Project B

C# Unity

Delivered a project proposal, on behalf of our parent company, to a client in response to an RFP.

Redacted Project C

C# Unity FMOD Addressables

Worked on various areas of an upcoming flagship mobile title, including: audio-gameplay connection, addressables content management, asset configuration, and more!

Education

Northumbria University

(September '16 - October '20)

MSc Advanced Computer Science

(Sep '19 - Oct '20)

Achieved: Distinction, with Honours (1:1)

BSc Computer Science with Games Development

(Sep '16 - Aug '19)

Achieved: 1st Class Honours (1:1)

Personal Projects

Racing under the Three Seas

Underwater, physics-based fish-in-cars racing game for GGJ'25 This was by far our most polished GGJ game to date, so I'm excited to see what we can achieve for GGJ'26!

Dengar

An 'endless' runner in reverse for JS13K, where the entire game must be less than 13kb.

Jekyll

Step into the laboratory of Dr Jekyll and concoct a cure to keep Mr Hyde at bay.

MBTA (WIP)

Utilising MBTA's API to create an LED live-map of current train locations, powered by a Raspberry Pi.
